

Karishma Saxena

Full Stack Developer | Applied AI & Agentic Systems

+91-7522896206 • saxenakarishma13@gmail.com • linkedin.com/in/karishma-saxena-a49134261 • github.com/KarishmaSaxena • Greater Noida, India

Full Stack Developer with 2 years 10 months of experience building production web applications with React.js, Django REST, Java, and SQL, now extending into applied AI and agentic systems. Hands-on experience building an AI pipeline builder (FastAPI + React), applying transformer-based NLP models, and completing an Agentic AI/MCP course. Strong foundation in REST API design, database architecture, and shipping full-stack products end-to-end.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, SQL

Full Stack Development: React.js, Django REST Framework, Java Spring Boot, RESTful API Design, JWT Authentication, Vite

Applied AI / GenAI Foundations: NLP (NLTK, Transformers), Sentiment Analysis (VADER, RoBERTa), Prompt Engineering, Agent & MCP Fundamentals, Node/Pipeline-Based Workflow Design

Databases: PostgreSQL, MySQL, MongoDB, Neo4j (Graph Databases)

Tools & Practices: Docker, CI/CD (GitHub Actions), Git, Postman, Power BI, API Testing, Debugging, Agile Collaboration

WORK EXPERIENCE

Software Engineer

Sep 2025 - Present

Lineaje

Remote

- Developed backend systems using Java and PostgreSQL for package and vulnerability management.
- Designed and optimized database queries for large-scale data processing; built analytical dashboards for catalog and dependency visualization.
- Implemented Neo4j graph databases to model complex dependency relationships.
- Built and maintained REST APIs and backend validation logic for enterprise applications, improving data integrity across services.
- Analyzed workflow data and system behavior across multiple applications to debug inconsistencies and improve reliability.
- Worked extensively with dashboards, reporting modules, authentication systems, and workflow analytics.
- Collaborated with cross-functional engineering teams to resolve defects and improve API and data accuracy; built and maintained an automated UI testing framework (Playwright-based) to streamline QA coverage across the product.

Software Developer

Sep 2024 - Aug 2025

Ravana Logistics and Technologies Pvt. Ltd.

Bangalore

- Online Transport Review System** (Dec 2024 – May 2025): Built using React (frontend) and Django (backend); implemented transporter search, reviews, ratings, and blacklist verification for fraudulent transporters and load tracking; integrated REST APIs via Axios; designed PostgreSQL schema for transporter, review, and user data.

Software Developer Intern

Mar 2024 - Aug 2024

Rideinsta Tours and Travels Pvt. Ltd.

Bangalore

- Developed and maintained business management systems for vehicle inventory and booking operations.
- Built reporting features and operational workflows; managed database operations ensuring data consistency across modules.

Frontend Developer Intern

Nov 2023 - Feb 2024

Legals Log Technologies

Remote

- Developed dashboard interfaces for legal workflow management systems using React.js.
- Integrated external systems and built reporting/tracking interfaces, improving data accessibility for end users.

PROJECTS

Puremandi — Full-Stack E-Commerce Platform

React, TypeScript, Django REST, JWT, Razorpay

- Built a full e-commerce platform with product catalog, cart, wishlist, reviews, offers, and order management; JWT-based authentication and Razorpay payment integration on a Django REST backend with a React/TypeScript/Vite frontend.

AI Pipeline Builder

FastAPI, React, Node/Edge Graph Architecture

- Built a visual pipeline builder with a FastAPI backend for parsing node/edge graph structures and a React frontend — hands-on exposure to the workflow/graph patterns underlying agentic AI systems.

LinkedIn Agent Analytics Platform

Python, Docker, CI/CD, Power BI

- Built an end-to-end data pipeline (ingestion, data-quality checks, anomaly scoring) with a Dockerized setup, GitHub Actions CI, pytest coverage, and Power BI export via a star-schema data model.

Sentiment Analysis: VADER vs. RoBERTa

Python, NLTK, Hugging Face Transformers

- Compared rule-based (VADER) and transformer-based (RoBERTa) sentiment models on Amazon product reviews, including NLP preprocessing, per-model scoring, and visualization of results.

EDUCATION & CERTIFICATIONS

B.Tech, Computer Science Engineering — Teerthanker Mahaveer University, Moradabad

2025

AI Engineer Agentic Track: The Complete Agent & MCP Course (Udemy) · Python Full Stack Developer (Udemy) · SQL Basic (HackerRank)
